Review of: "Development Of A High-Fat Diet And Low-Dose Streptozotocin-Induced Rat Model For Type 2 Diabetes Mellitus"

Dewi Ratih Tirto Sari¹

1. Pharmacy, Universitas Ibrahimy, Situbondo, Indonesia

Authors report the development of rat diabetes mellitus in a rat model. The introduction was clear and showed the research gap. The method was clear and reliable. The result was clear and answered the problem. The discussion was clear, but too short.

Please add more discussion, involving:

1. How does the STZ mechanism affect diabetes mellitus?
2. What is the maximum STZ dose for diabetes mellitus?
3. How does a high-fat diet promote diabetes mellitus? Explain the mechanism clearly and in detail.
