Unravelling the Phytochemical and Pharmacognosy Contour of Traditional Medicinal Plant: Pterocarpus Marsupium Roxb

This is an updated review manuscript about one of the most important plants used in traditional system of medicine in India, the last review article about the plant was published since 2009.

The manuscript requires revision before final consideration.

Suggestions:

1. Please check and revise the manuscript for the English language.
2. In title, the Latin name of the plant was written in wrong format.
3. Merge table 1 and table 2 in one table.
4. Rewrite the sub headings in consistent uniform manner.
5. The subtitle number 5, the paragraph describes the traditional uses of the plant so I suggest to rename it by traditional uses or ethnic uses. Followed by subtitle number 6. Pharmacological Activities.
6. Be sure that you mention the part of the plant and the type of extract throughout your discussion about the pharmacological Activities of plant.
7. In vitro should be written in italic format.
8. IC<sub>50</sub> should be written in right format.
8. In reference section, reference number 3 (Wikipedia) is not a reliable trusted source of scientific information.
