Potential competing interests: No potential competing interests to declare.

Regarding the energy scenario of any country, it is very hard to focus on one few points because each process is highly dependent on others and their consequences are associated with each other. Population growth is main cause of energy consumption but at the same time it is useful assets and provides many expertise and labor for rapid work and technology enhancement. the facts that causing serious problem for many under develop countries are miss management and unequal distribution of resources among whole population of the world. Regarding the context of this article there are some technical flaws which should be addressed.

Some rational regional analysis should be considered for the equal distribution of resources among whole population of the country, proper education, and training to make them able to contribute well for their country and world.

International laws are policies can never be fitted 100% on local level so there should be some proper modification with the public opinion for their implementation.

There is need of grammar correction and figures needs to be plotted again to convey the clear message to the reader in first sight, for which Author can use some updated software like origin or others.

Some latest literature should be cited like: <https://doi.org/10.1111/opec.12230>
