Potential competing interests: No potential competing interests to declare.

1. As the aim of the study was to evaluate the amounts and sources of fluids consumed by adolescents, it should be described in detail in the method section how the amount of each beverage was evaluated. And for which period beverage consumption was calculated. Also, it should be explained that the amount was presented and calculated in ml/day.
2. It was really difficult for me to follow the results because there is no mentioned there that all amounts are per ml/day, isn't it? So, in the results section, for all numbers in brackets must be added measure – ml/day for beverage consumption.
3. I am also not a native English speaker, but some sentence constructions should be changed.
4. Also, I could not see Tables in the manuscript. They should be added if are omitted.
