Expansion of the Experimental Antifungal Activities through In Silico Docking Study of Compounds from Albizia Lebbeck.

Abstract: I suggest the authors include general conclusions obtained in their work.

Materials: I suggest the authors complete the information by specifying the dimensions and coordinates of the docking box.

Results: I suggest the authors show a table with the results of the computation on the evaluated organisms.

Conclusion: I suggest the authors rewrite their conclusion taking into account the results they obtained.

Description: Acceptable with minor revisions.
