

Review of: "Prevalence of visual impairment and associated factors among welders in West Shewa Zone Oromia Region, Ethiopia"

Viral Dave

Potential competing interests: No potential competing interests to declare.

The abstract suggested a cluster sampling technique, but nowhere in the methodology is the cluster sampling explained. The Institutional Ethical Board clearance shall be mentioned with specific details of the same. The association between a few factors may be spurious, like the association between coffee drinking and visual impairment. The pre-existing diseases, i.e., glaucoma, cataract, or a past history of eye injury, shall be excluded due to potential bias.
