I commend the effort of the author on the review paper titled "Exploring the Significance and Medicinal Potential of *Rubus fraxinifolius*: A Review of the Ragimot Wildberry."

However, the author will need to do a little more work to improve the review paper.

1. The aim and objective of the review is written somewhere at the beginning of the introduction; I think it is better when written in the last paragraph of the introduction.
2. The write-up on the nutritional composition and functional properties of "*Rubus fraxinifolius*" is not detailed. The author mixed up the two sections in the write-up; he needs to be more specific and detailed in these two sections. The functional properties, or better still, the bioactive properties of *Rubus fraxinifolius*, should be discussed in subsections with adequate references.
3. Summarily, the work is too shallow for a review; the author should make the work more detailed.
