Alcohol-free Hypoallergenic Barrier Film Solution

National Cancer Institute

Source

National Cancer Institute. *Alcohol-free Hypoallergenic Barrier Film Solution*. NCI Thesaurus. Code C158820.

An alcohol-free, hypoallergenic, polymeric-cyanoacrylate-based solution that provides a barrier film, with potential skin protective and healing activities. Upon topical application of the barrier film solution to intact or damaged skin, the alcohol-free barrier film solution forms a breathable, transparent film over the skin and maintains and enhances skin integrity, provides long-lasting protection against skin injury, infection, and irritation, and maintains moisture to the skin.
