Potential competing interests: No potential competing interests to declare.

This paper addresses a significant and fascinating topic: technological unemployment, skill mismatch, and the future of higher education in Post-Pandemic Nigeria. While the literature review is commendable, certain areas could be improved as follows:

1. Strengthening the theoretical underpinnings section would be beneficial.
2. The policy recommendations regarding the future of higher education in Nigeria and addressing skill mismatch should be more robust.
3. Including more data and information about Nigeria, specifically related to unemployment and skill mismatch, would provide readers with a clearer understanding of this issue. It would be helpful to present the data using tables and figures.
