Potential competing interests: No potential competing interests to declare.

1. Any picture (research model) that the author can show? Put it in, not just a table.
2. This research was conducted in 2018? It's been a long time; hasn't there been a lot of change? Especially with the presence of Covid.
3. There are not many new insights in this research; try to bring up new things in the discussion of your research.
4. About your sample, is it the only regional hospital? Or how many are there in the southern region? Please write it down if there are an amount of regional hospitals.
5. This is confusing: your respondent requirement (sample framing) is nurses with more than 2 years of experience, but in the demographic sample table, there is a range of 1-5 years, and the frequency is large. How do you explain that the 1 year of experience is not included in the framing sample?
