# CRBN wt Allele

National Cancer Institute

## Source

National Cancer Institute. *CRBN wt Allele*. NCI Thesaurus. Code C104141.

Human CRBN wild-type allele is located in the vicinity of 3p26.3 and is approximately 31 kb in length. This allele, which encodes protein cereblon protein, is involved in ubiquitin-mediated protein degradation. Mutations are associated with autosomal recessive nonsyndromic mental retardation.
