**Potential competing interests:** No potential competing interests to declare.

I have read this paper and I found that the following list should be addressed:

1. The title should clearly indicate that the paper is a systematic review.
2. The databases used in the review should be mentioned in both the abstract and the methods section.
3. There are grammatical mistakes involving the use of the simple present tense (e.g., 'many people lives with pets' should be 'many people live with pets,' and 'people experiences' should be 'people experience').
4. Some commas are missing in the parenthetical citations and need to be corrected according to the APA citation style.
