

Review of: "How Competent are Health Professionals in Delivering Nutrition Education? A Cross-Sectional Study in Ebonyi State, Nigeria"

Martin Kofi Agyei

Potential competing interests: No potential competing interests to declare.

The paper is nicely done. However, under the methodology, the sample size calculation factored in a 10% non-response rate. This needs to be explained because cross-sectional studies would normally not need a non-response rate. For Table 6, after the p-value label, the next column has no label. It has to be corrected.
