Potential competing interests: No potential competing interests to declare.

This study 'Impact of Environmental Education on the knowledge and attitude of University of Benin students towards waste segregation,' is an very important study owing to the fact that waste management and environmental degradation due to solid waste in general is a global problem.

The abstract is way too long and should be shortened.

The introduction and the literature should be separated and reduced.

It is mandatory that papers should consult recent literatures to really establish the newness of such study

Part of the research questions and hypotheses should be shaped into chapters with a little more details.

Paragraph of limited sentences should be avoided.

There seem to be little confussion in the sampling of the study and should be corrected.

The conclusion of the study should be made to completely highlight the result in comprehensive but shortened form.

References are mearnt to be limited to the last 5-10 years at most.
