Libenzapril

National Cancer Institute

Source

National Cancer Institute. *Libenzapril*. NCI Thesaurus. Code C81335.

A long-acting, small polar angiotensin-converting enzyme (ACE) inhibitor with antihypertensive activity. Libenzapril competitively binds to and inhibits ACE, thereby blocking the conversion of angiotensin I to angiotensin II. This prevents the potent vasoconstrictive actions of angiotensin II and results in vasodilation. Libenzapril also decreases angiotensin II-induced aldosterone secretion by the adrenal cortex, which leads to an increase in sodium excretion and subsequently increases water outflow.
