Congratulations on this writing. Indeed, thyroid tumor is a challenging area, not just in the matter of borderline lesions, but also to determine the nuclear PTC score. This cause discrepancy in the diagnosis of PTC in many countries in the world. There was discrepancies of diagnosis in Asian and Caucasian as well. Even in Asian, I personally think that Indonesian number also different with high incidence of tall cell variant, perhaps due to change of tall cell criteria in WHO 2017 and 2022. Further study needed for this issue.
