Potential competing interests: No potential competing interests to declare.

1. Please state the full names of "ECO-CSB" and "ECO-CSSB."
2. Citations are needed for all statements, especially in the introduction part.
3. The introduction part is too lengthy compared to the main findings of the paper.
4. Please justify why 18 days of curing time is chosen.
5. Suggest showing the results in graphs to have a better and clearer view.
6. The results only cover the unconfined compressive strength of the soil-cement mixture with CSSB. It doesn't cover any testing on the application of the soil-cement pile in the soft soil as per the title. Suggest revising the title to match the scope of the study in the research.
7. The writing style may be improved. It is a bit confusing when reading the article. Readers are unable to find the important findings in the paper.
