**Potential competing interests:** No potential competing interests to declare.

**Title:** Investigation of Mechanical Properties of Sisal Fiber and Sugar Palm Fiber Reinforced Hybrid Composites

## Review Comments:

1. The introduction part is not related to recent articles; the author must cite new references.
2. The purchase of the chemical details is not mentioned in the materials and methods section.
3. Most of the grammatical errors have been noticed in many sentences.
4. The author is streamlining the procedure with a simple form.
5. Figure quality and resolution must be enhanced.
6. How to confirm the composites without characterization such as XRD, FTIR, and SEM, etc., justify.
7. All the 10 references are only cited in the introduction, and what about the remaining part? Justify.
8. Results and discussion part is not sufficient, and the comparison of earlier studies is a must.
9. The novelty of the present work needs to be clarified.
10. The conclusion part must be revised as per journal standards.
11. This is like a mini research report, and it is not in journal format.

Based on the above comments, the present form of the manuscript **is not recommended** for publication.
