Dear Authors, your background idea is good but the manuscript lack in each section and it should be improved

Abstract:

The abstract is not offering a comprehensive overview. The abstract focuses on fluoride effects but omits the role of yogurt. A sentence or two about the broader implications or novelty of the research could enhance the abstract.

Introduction:

There is a good background on fluoride, but the potential role/effects of yogurt are missing. The introduction could be better structured from a broad context to a narrower focus.

Methods:

Specific details about the groups and treatments are provided but experimental design about fluoride and yogurt dosages, administration method, duration, and observations are needed.

Results:

Group clarification is mentioned, but their specific roles are unclear. Consider using tables or figures for concise data representation.

Interpretation or broader implication of each key finding would help to improve contextual information.

Discussion:

Direct comparisons between the results of study results and existing findings could be stronger by deep diving.

Ethical Consideration:

Ethical considerations regarding animal experiments should be mentioned.
