Dear Authors,

the paper "Italian Position Paper (SIPMO-SICMF) on Medication- Related Osteonecrosis of the Jaw (MRONJ) "is really interesting, well conducted and fits the objectives of the journal;

Relevant and valid sources of literature, were used and listed in the paper. Also, the paper was written so that mostly references that are not older than 3-5 years were used.

The topic of the paper is relevant to the area covered by the MRONJ, i.e. the paper corresponds to the scope and profile of the Journal, and is appropriately structured and written.

The idea is original and differs from previous papers on a similar topic, i.e. the paper brings new knowledge and contributes to the development of the research area.

The paper presents the way in which the study contributes to previous research. By connecting with previous knowledge covered by the Journal and bringing new ones, it shows the coherence of the field and can serve as a foundation for the next steps of research.

The quality of the language in the context of grammar, syntax and spelling is solid, however, when reading the paper, I occasionally get a certain impression of confusion.

It is necessary to review some points in order to improve the quality of the paper:

-Please be sure to use only keywords accordingly to medical subject headings (Mesh word) for a better indexing.

Thank You,

Kind Regards
