

Review of: "Economics of Cattle Fattening - A Case of Bangladesh"

Snežana Paskaš

Potential competing interests: No potential competing interests to declare.

This work is engaging and well-written.

Some recommendations are that the references should be updated because some are more than ten years old (esp. in the Introduction section) and that some sections, such as the Conclusions and Introduction sections, are too long.

In addition, it would be beneficial to include tests of comparative significance between some groups (e.g., regions, gender, etc.).
