**Potential competing interests:** No potential competing interests to declare.

The paper has an interesting starting point, but as a scientific work, it has several limitations. The methodology adopted is unclear, and the results obtained are also not clear. Who participated in the study? How many responses were received? The references are largely out of date in relation to the intended focus of the research. Citations in the bibliography are neither consistent nor correct in format. The same happens with the final list of references. The text needs revision. The entire paper requires an in-depth review before being submitted.
