The article is well written. However, it looks incomplete. It needs major revision before it is accepted for publication. The authors need to incorporate the following suggestions:

1. The authors need to add a section discussing the applications of protein and peptide loaded nanocarriers for the treatment of major diseases such as Cancer, Cardiovascular disorders, diabetes, neglected diseases etc.
2. All the protein and peptide loaded nanocarriers investigated at different stages of clinical trials and commercially available nanocarriers should be tabled.
3. In the conclusion section, the challenges faced in the translation of these nanocarriers from laboratory to clinical setting and then commercialization, along with possible suggestions for overcoming these challenges, should be discussed.
