# Taurultam Analogue GP-2250

National Cancer Institute

## Source

National Cancer Institute. *Taurultam Analogue GP-2250*. NCI Thesaurus. Code C159500.

An oxathiazine-based structural analogue of taurultam (TRLT), which is the main derivative of the anti-infective agent taurolidine (TRD), with potential antineoplastic activity. Upon administration, GP-2250 selectively induces reactive oxygen species (ROS)-mediated apoptosis in and inhibits proliferation of susceptible tumor cells.
