Potential competing interests: No potential competing interests to declare.

It's my pleasure to review this paper. Firstly, I would like to appreciate effort of researcher for this manuscript, and I commend my congratulations to them for making it done. After going through the paper, I have found that the paper needs a few things to make it a better one.

1. The references should be latest one, as a number of references used are too old for research publications.
2. The literature review be more clear
3. The paper is with more worth for publication because it will show path way for microfinance institutions work according to conclusion of paper for more benefit of poor community to increase their livelihood and economy.
4. More, recommendations are suggested as author see the data and Interco communicate with institution.
5. The paper should be published after incorporating suggestions as above. I really appreciate the determinations of the researchers and wish them good luck for their future accomplishments.

Best,

*Rana Naveed Mustafa*
