Firstly thank you very much for inviting me in this review process. The study is interesting for social perspective and safety measures. However, I am recommending some corrections which are majorly required for further processing of the manuscript.

1. Mention the major findings of the study in short in the abstract section.
2. Try to avoid mentioning the long phrases, and words in keywords section. Revise it.
3. There must be a study background and research gap in Introduction section. Mention those.
4. If there is research questions linked with the objectives, mention the research questions also.
5. Include recent data/statistics of the stud area in the Methodology section on the issue discussed here.
6. There is a much more discussion on CPTED data collection method than CPTED data analysis with hot and cold spot.
Explain the analysis in methodology section with proper citations.
7. Maps (Figure 1a,1b,3&4) must be rebuilt with proper latitude, longitude, scale and legends.
8. Results of perception survey should be elaborated.
9. You must emphasize the the discussion and conclusion section. These are not a true reflection of the analysis and results.
10. Check and verify the references linked with the each and every citations.
