# Rieger anomaly

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Rieger anomaly. ORPHA:91483*

Rieger's anomaly is a congenital ocular defect caused by anterior segment dysgenesis and is characterized by severe anterior chamber deformity with prominent strands and marked atrophy of the iris stroma, with hole or pseudo-hole formation and corectopia. The term covers the association of these iris and pupil anomalies with the features of Axenfelds anomaly (see this term).
