Review of: "Quantifying Water-Food Nexus (Water Footprint) for Food Crop Production: A Case Study of Addis Ababa City"

Mohammad Sharifi¹

1. University of Tehran, Iran, Islamic Republic of

Dear Editor,

This manuscript addresses a relevant and practical topic in the field of water and food in urban agriculture, with significant potential for contribution. The objectives are clear, and the methodology is appropriate. However, the article requires some minor revisions and clarifications. With these adjustments, it could become a valuable and publishable contribution.

Comments:

Please provide keywords after the abstract.

It would be better to discuss the impact of weather and climate change on the water-food nexus in the introduction.

There is no explanation given about the study area. A section titled "Study Area" should be created at the beginning of the Methods section, and the explanation should be included along with a map of the location of the area.

In the results section, compare your results with those of previous studies in this field.

Please elaborate in the results section on the future implications and potential applications of the study's findings.
