Potential competing interests: No potential competing interests to declare.

The word "experience" was not added to the keywords. Details of the interviews are not adequately presented in the method section. For example, what kind of meeting was held and how long did it last? The validity and reliability of the research are not included. Characteristics of the participants are not included. For example, in a table, participants' gender, age, seniority, etc. features could be given. The questions and sub-objectives of the research were not included. The data collection process, findings, results, discussion and recommendations are given very superficially. References are quite few.
