Fetal akinesia deformation sequence

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. [Fetal akinesia deformation sequence](#). ORPHA:994

The fetal akinesia/hypokinesia sequence (or Pena-Shokeir syndrome type I) is characterized by multiple joint contractures, facial anomalies and pulmonary hypoplasia. Whatever the cause, the common feature of this sequence is decreased foetal activity.
