It is an excellent framework showcased by the authors regarding the uncertainty of low carbon emissions. There are certain comments to which I wish the authors would respond:

1. What are the foundations or bases of the equations that were used in section 3.1.2?
2. Is it possible for the authors to insert an overall holistic infographical algorithm for the better understanding of the full framework?
3. The conclusions of the work could be improved and compressed into key findings and points.

I wish the authors all the best for the manuscript and its further proceedings.
