Potential competing interests: No potential competing interests to declare.

The topics raised in this article are of particular interest to the field of bioinformatics. However, the preparation of the article needs a lot of improvement, for example the conclusion section should be placed at the end after the discussion, the grammar used needs to be improved and adjusted to scientific principles, and so on.

The methodology section needs to be improved again by explaining systematically and in detail the data and protocols used, as well as the metrics used to measure protocol performance. The results and discussion sections need to be rewritten more systematically and add analysis of each result obtained.
