Potential competing interests: No potential competing interests to declare.

The research is interesting with the potential of finding the gaps and bridging international policy/approach and local practices. Background and literature review read well, but the methodology isn't clear. Please state how data is collected and analyzed as this informs readers on how to approach the discussion.

The findings of the research are not stated clearly in the conclusions. The conclusion is rather a general statement when it should be stating the main findings and arguments of the paper.
