# Isolated hemihyperplasia

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Isolated hemihyperplasia. ORPHA:2128*

Isolated hemihyperplasia is a rare overgrowth syndrome characterized by an asymmetric regional body overgrowth, involving at least one limb, and associated with an increased risk of developing embryonal tumors, principally nephroblastoma (see this term) and hepoblastoma.
