Ulocladium

National Cancer Institute

Source

National Cancer Institute. *Ulocladium*. NCI Thesaurus. Code C125978.

A genus of saprophytic fungi in the family Pleosporaceae with numerous, usually solitary, multicelled conidia that are typically obovoid, dark brown, and often rough-walled.

Ulocladium species are commonly found in the soil and on decaying herbaceous plants but they also grown indoors on cellulose containing materials.
