The work is interesting and good knowledge addition. There are some suggestions to improve work effectiveness:

- 1- The conclusion should be numbered instead of paragraph.
- 2- The references used are old. There should be more referees from latest published work.
- 3- The local regulator electricity tariff and other economic parameters to be considered for bank ability of the CSP project.
- 4- The technical and economics parameters and assumptions should be mentioned in the work.
- 5- why and how the 1MWe capacity is selected both on technical and economical parameters?
- 6- The validation of the work is missing.
- 7- The environmental impact and carbon emission saving of the work is missing.
- 8- The writing is not up to mark of a good academic writing and need thorough revision to improve writing.
