

Review of: "Economics of Cattle Fattening - A Case of Bangladesh"

Taufiq Nawaz

Potential competing interests: No potential competing interests to declare.

The article provides valuable insights into the profitability and marketing system of cattle fattening in Bangladesh. I recommend accepting the paper with minor revisions. Specifically, the language could be refined for clarity and coherence. Additionally, consider providing more context on the challenges faced by farmers and specific measures for improving sustainable cattle fattening practices in Bangladesh. Overall, the paper contributes significantly to the understanding of this agricultural practice in the context of Bangladesh.
