Potential competing interests: No potential competing interests to declare.

It is an important study. Here are some suggestions as follows.

1. The introduction is too long. Some parts of the introduction section should be displaced in the discussion.
2. Maybe, the authors should explain more the methods of data collection. Whether it was done by health professionals or autoadminstered , how were the questionnaires distributed etc.
3. I think it is not necessary to explain the binary logistic regression formula.
4. Discussion should be richer.
