Potential competing interests: No potential competing interests to declare.

"Exchange Rate Pass-Through and Inflation on Unemployment in Nigeria" is a well-researched paper both in terms of the existing body of knowledge reviewed and the graphically displayed data. Profundity of the paper also reflect in the mixed econometric methods applied to the data analysis. However, a critical attention should be paid to the references which is expected to be APA methodical. The author is therefore advised to correct the anomalies in the referencing. Good luck.
