Review of: "What is Life: a Biochemist's View"

Bernhard Schink[1]

1. Universität Konstanz, Germany

The manuscript has grown and improved substantially in its second version. I have only a few comments for further improvement as follows:

Chapter 1, last paragraph, first line: ...was made possible only through...

Chapter 2, l. 2: ...lineage of species...

Fig. 2: should better be printed in a mirrored way, to be read from left to right.

Unfortunately, there are no line numbers for easier reference.
