

Review of: "[Case Study] Targeting the Warburg Effect with the Glucose Mutation Theory: A Case Study of 36-Year-Old Female Treated for Stage IV Metastatic TPBC Using Glucosodiene Over a 15-Day Period"

Boyang Li

Potential competing interests: No potential competing interests to declare.

1. The observed reduction in bone disease progression needs to be further quantified.
2. The patient's personal background needs to be further elaborated.
3. The indicators of alkaline phosphatase (ALP), carcinoembryonic antigen (CEA), and antigen CA 15-3 need to be clarified.
