

# Review of: "Rules Extraction, Diagnoses and Prognosis of Diabetes and its Comorbidities using Deep Learning Analytics with Semantics on Big Data"

Seema Shedole

Potential competing interests: No potential competing interests to declare.

The article is quite exhaustive and has addressed carefully critical issues in the field of Diabetes and in general in health care domain. The result section is also exhaustive.

The work should have explained the data set in the methodology section.

The authors have done extensive literature survey.

A comprehensive description of the various techniques with the advantages, limitations would have given clear picture of the understanding and further suggestion taken for the model proposed in the result section would be appreciated.

The paper should have given a comparison between the existing models and the proposed model comparing the various performance parameters.

Some small grammatical errors in the paper which can be ignored.
