Potential competing interests: No potential competing interests to declare.

1. A similar study has already been published and, as such, lacks novelty. Please refer to the link provided - <https://doi.org/10.3389/fphar.2022.918071>
2. The introduction section is very short; please include more literature survey.
3. Scientific name *Solanum nigrum* Linn. of this plant should only be there while starting the manuscript; for the rest of the manuscript, *S. nigrum* could be used.
4. Make sure *Solanum nigrum* Linn. or *S. nigrum* is in italics everywhere in the manuscript.
5. Short forms can be used; rather than writing centimetre, cm can be used throughout the manuscript.
6. Only nine phytochemicals are listed in this manuscript. The literature mentioned in point number one lists 188 phytochemicals.
7. Paragraphs in section - 3, "Detailed of different pharmacological and therapeutic potentials". Each and every pharmacological activity should be compiled in a single paragraph along with their citations.
8. Section 3.15. it is mentioned as "protective activities". Please specify this paragraph or add the contents of this paragraph to its specific pharmacological activities.
9. Section - 4. Clinical trials can be tabulated with all their details.
10. Please add a conclusion section.
11. While writing a review paper, one should not cite review papers; please check the reference section. Overall, I can't be more positive on this manuscript and will not consider it for publication.
