

Review of: "Correlation Between HbA1c and Body Mass Index Among Patients with High Lipid Profile Attending Johns Hopkins Aramco Healthcare Hospital in Saudi Arabia"

Meta Herdiana Hanindita

Potential competing interests: No potential competing interests to declare.

The research title chosen by the author is very interesting and very necessary nowadays. However, there are several notes that need to be paid attention to.

1. Why did researchers choose the title "high lipid" instead of hyperlipidemia?
2. It is said that this research is cross-sectional, while data is taken from medical records. It seems that a retrospective study is more appropriate.
3. Participants are required to be over 18 years old, but in the same sentence, it is stated that they must be 20 years old or older. Which one is true?
