

Review of: "Occupation from a perspective of complementarity - Part 2 - Proposals for situating a complementarity perspective in occupational science"

Jhon Jairo Mosquera Rodas¹

¹ Universidad Cooperativa de Colombia

Potential competing interests: No potential competing interests to declare.

By reading I can provide you with different methodologies that could facilitate the methodological transition from philosophy to medicine, specifically to the occupational part. For this purpose, some complex methodological tools have been developed, which I can see can be useful for your research:

<https://revistas.uned.es/index.php/rdh/article/view/22617>

In this article, the communicative asterisk is used as a possibility of linking terms or concepts from different disciplines of knowledge (see p. 191).

https://figshare.com/articles/book/Libro_2_El_saber_real/14444333

In this book there are different methodologies of complex order that can facilitate the research process.

It is important to keep in mind that your research is not linear and is more limited to the complexity sciences and to methods that are much more advanced than those used in type I or classical science.

I hope I have contributed to your purpose.

Best regards
