First of all I want to thank Raffello Vigano for this study.

It is satisfying and offers a fresh perspective for readers. I have some comments for the manuscript.

- 1- I couldn't see the figure 1 which is mentioned in material-method section.
- 2- If you can put some surgical procedures which containing the sugical site and application of the PRP, it would be so helpfull for the readers.
- 3- In results section it is mentioned like 75 patients but this study contains 35 patients, I think there is a misunderstanding.
- 4- In figures section figures start from figure 5, you can check this section for the missing figures.
- 5- The discussion section can be expanded so that we can better understand the benefits of this PRP technique.
