Potential competing interests: No potential competing interests to declare.

I am grateful for the opportunity to review your manuscript and, in this way, collaborate with other reviewers/scientists through the Qeios platform. My observations/notes are as follows:

This is a good topic but there are some important points:

1. Inconsistent. Academic writing should be improved.
2. Research gap is not clear. The research gap should be clear in the introduction.
3. The main construct of "nexus between energy policies and supply" is not defined clearly. The word "nexus" in this case needs clarification.
4. The hypotheses are not argued clearly. Hypothesis - if they are- should be argued separately.
5. The abstract should be rewritten. There are many repetitive sentences. In addition, the methodology should be clearly introduced in the abstract.
