Potential competing interests: No potential competing interests to declare.

The article brings up a very relevant topic today, mainly linked to teaching, more specifically the teaching of dentistry. Some points need to be revised and improved in order to make the article more fluid to read and easier to understand for readers not used to the subject. The tables and the results section of the article need to be rewritten and perhaps summarized; they are long and confusing, and the data needs better statistical treatment.

The discussion section and the introduction need a better review of the literature; the articles used are old and not in line with the most recent findings on the subject.

Finally, the grammar of the manuscript should be refined and revised, as some of the terms used are not in line with the norms accepted in scientific texts.
