Potential competing interests: No potential competing interests to declare.

Justify the design decisions made during the study and explain how they contribute to the proposed solution.

The novelty of the research is unclear and should be elaborated upon to highlight its contribution to the field

- While the experiments are convincing, it is crucial to compare the results with more recent studies for context.
- Include a thorough statistical analysis of the experimental results to validate the findings.

The reference list is generally appropriate but includes some outdated references that should be updated.

There are a few irrelevant references that need to be removed for a more focused bibliography.

Ensure all important references related to the topic are included for comprehensive coverage.

Rectify any inconsistencies in the citation format.
