The manuscript titled "Incidence Risk of Major Reproductive Disorders of Dairy Cows and Cow-Level Risk Factors in Wolaita Sodo Town, Southern Ethiopia" is an interesting manuscript that targets the reproductive disorders in dairy cattle. The authors made great efforts in writing this review in a well-structured way and presenting important data, in addition to highlighting the risk factors contributing to these problems. The English language used for writing this manuscript is acceptable.

The abstract section is well formatted and has all the needed data. In addition, the introduction highlights well the addressed problem. The Materials and Methods section describes in detail the way of data collection using questionnaires and a management system in the area of study. Moreover, the authors mentioned how the dairy cows were managed. The statistical analysis is appropriate for this type of data. The data of this investigation was described in detail in the results section. The results and relevant publications are well discussed in the discussion section using up-to-date literature which is closely related to the study topic. Therefore, I recommend acceptance of this manuscript in this form.
